

Wightstorm Forward Base

Spawns in **HS** storms. Can be upgraded depositing a **Cryostorm Clarifier** into Sansha's Transit Modulator.

Base sites (no upgrade) spawn one wave of NPCs, followed by a boss with 2m ISK bounty. For upgraded sites about 30% more rats spawn with the wave, boss has 3m ISK bounty.

Completing the event-track through non-upgraded HS sites, yields about 400m ISK of loot and 100m bounty (on top of the event-track rewards). Takes about 5 hours without competition.

Fittings

Base site

- [Gila](#) (pull drones before boss spawn and launch once boss aggro is on your ship)
- [Sleipnir](#)
- [Vagabond](#) (keep targets at 2km, if too much pressure, kill big targets first and get angular velocity instead, use drones aggro as tank option and heat resists if necessary/use adc, switch to hail for boss armor)

Upgraded site

- [Gila](#) (pull drones before boss spawn and launch once boss aggro is on your ship)
- [Vagabond](#) (keep targets at 2km, if too much pressure, kill big targets first and get angular velocity instead, use drones aggro as tank option and heat resists if necessary/use adc, switch to hail for boss armor)
- [Alligator](#) (use faction missiles for non-boss NPCs, kill neuts first)

Alpha fit: (normal and upgraded)

- [Gila](#) (make sure you have max alpha skills for dmg and tank, kill battle cruiser first, use Caldari drones unless for boss, there Amarr drones hit harder.)

Loot

Find some loot runs on EVE Journal for these sites [Wightstorm Forward Base Loot](#).
