Summary

The Metaliminal Meteroid Homefront sites require a single rock to be mined out. A rock contains 5,000 units (20,000m3) of a Mutanite ore type* that can be sold to NPC buy orders for 5,000 isk each. Residue mechanics apply.

On warp in, a set of NPCs will start attacking a fleet member and occasionally switch target.

Due to the spawns being faction specific, strategies and fittings differ.

*The rock to be mined out contains one of the following ore types, which is just a flavour aspect of a site and affects the colour of the environment:

- Peregrinus Mutanite (green)
- Amperum Mutanite (blue)
- Solis Mutanite (purple)
- Tenebreat (gray/brown)
- Conflagrati (red)

> Upon completion (the rock has been mined out), with 5 participating pilots, each fleet member receives a payout of **12m** isk for a total of **60m** isk. On top of that, the ore can be sold to NPC buy orders for **5,000** isk per unit, which should net an additional average of **15,500,000** isk, assuming a residue probability of 34% (T2 mining laser).
